**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-21, drawn to an optical pattern generator, wherein the offset direction is generally aligned with a radial direction of the optical element, classified in class 359, subclass 196.

II. Claims 22-33, drawn to an optical pattern generator with two counter rotating optical elements, classified in class 359, subclass 216.

III. Claims 34-39, drawn to an optical pattern generator with two optical elements, wherein at least two of the corresponding facets cause unwanted optical effects that occur for each facet acting alone but that counteract each other when the facets are acting together, classified in class 359, subclass 217.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not

Art Unit: 2872

require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require the particulars of subcombination such as two counter rotating elements. The subcombination has separate utility such as a system not requiring generating figure.

3. Inventions III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the optical pattern generator with two optical elements, wherein at least two of the corresponding facets cause unwanted optical effects that occur for each facet acting alone but that counteract each other when the facets are acting together. The subcombination has separate utility such as a system not requiring generating figure.

4. Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require counteracting unwanted effects. The subcombination has separate utility such as the optical pattern generator with two optical elements, wherein at least two of the corresponding facets cause unwanted optical effects that occur for each facet acting alone but that counteract each other when the facets are acting together.

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or III, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 2872

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
